Cells and cell processes

CORE questions

Core 1

Two characteristics of living organisms are nutrition and respiration.

(a)	(i)	List three other characteristics of living organisms.
		1
		2
		3[3]
	(ii)	Name the process by which green plants produce carbohydrates.
		[1]

[Total: 4]

Table 1 describes some of the characteristics of living organisms. Complete the table by identifying each characteristic described. The first one has been completed as an example.

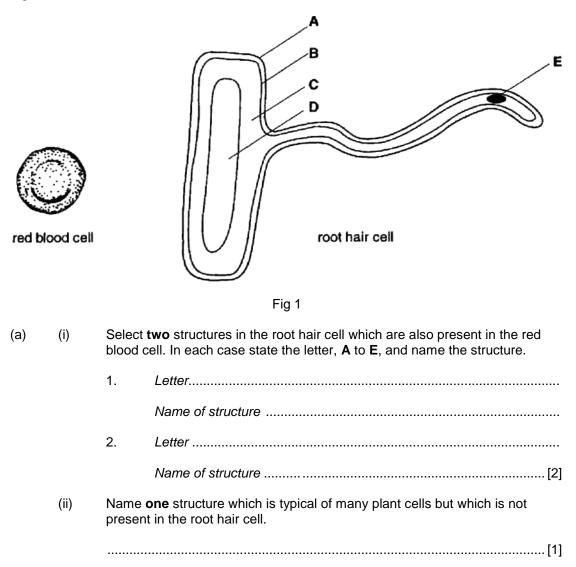

Table 1

Description	Characteristic
Responding to stimuli in the environment	Irritability
Releasing energy from sugars	
Producing more organisms of the same type	
Getting rid of waste chemicals made in the organism	
Obtaining the materials for growth	

[4]

[Total : 4]

Fig. 1 shows a red blood cell and a root hair cell.

(b)	State one major function of each cell and describe one way in which the cell is adapted to carry out this function.		
	(i)	Red blood cell.	
		Function	
		Adaptation	
		[2]	
	(ii)	Root hair cell.	
		Function	
		Adaptation	
		[2]	
		[Total : 7]	

ALTERNATIVE TO PRACTICAL questions

Alternative to Practical 1

An experiment was carried out to investigate the effect of different concentrations of sucrose solution on the length of potato strips.

Five test-tubes were set up, each containing a different concentration of sucrose solution. Another tube was set up containing the same volume of distilled water.

A strip of potato tissue was placed in each tube. The strips were of equal size and as shown in Fig. 2

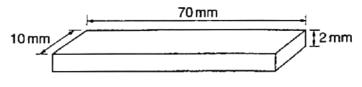

Fig. 2

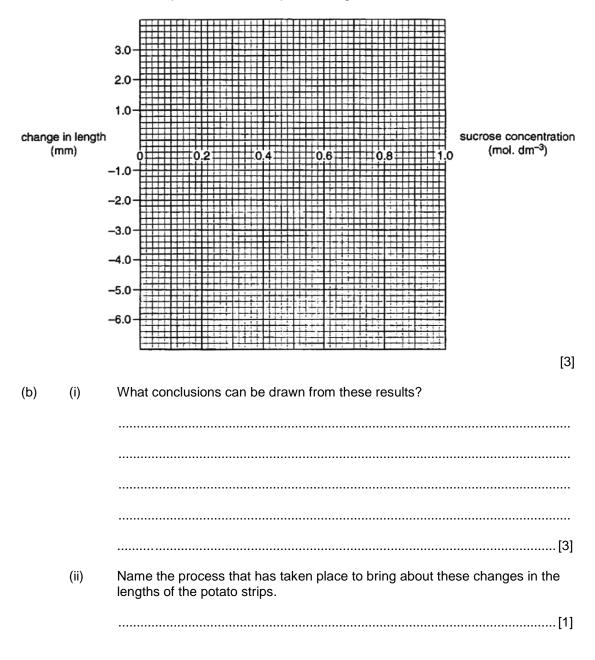

These strips were completely covered by the solutions and were left in the tubes for 30 minutes. The potato strips were removed and measured. The results are shown in Table 2

concentration of sucrose solution (mol dm ⁻³)	initial length (mm)	final length (mm)	change in length (mm)
0	70	73.0	
0.2	70	71.5	
0.4	70	69.0	
0.6	70	67.0	
0.8	70	66.0	
1.0	70	64.5	

Table 2

Alternative to Practical 1

- (a) (i) Complete Table 2 to show the change in length of each strip.
 - (ii) Plot the changes in length against the concentration of sucrose solution on the axes provided. Join the points using ruled lines.

EXTENSION questions

Extension 1

(a)	Draw a labelled diagram of a named specialised plant cell and describe its function.	[6]
(b)	Describe the structure and functions of mammalian blood cells.	[9]
		[Total: 15]

Extension 2

(a)	What is	s an <i>enzyme</i> ?	[3]
(b)	State the conditions in which enzymes work best.		[3]
(c)	Outline	the parts played by named enzymes in each of the following processes:	
	(i)	germination of seeds;	
	(ii)	the use of biological washing powders to remove protein stains;	
	(iii)	fat digestion in the alimentary canal.	

[Total: 15]

Cells and cell processes – answers

Core 1

- a (i) any three of these growth (or alternative wording) movement (or alternative wording) irritability / sensitivity (or alternative wording) excretion (or alternative wording) reproduction (or alternative wording)
- (ii) photosynthesis

Core 2

In order in the table

Respiration Reproduction Excretion Nutrition / feeding

Core 3

a (i) B – cell membrane

C - cytoplasm

- (ii) chloroplasts
- b <u>red blood cell</u>

any one of these functions with its relevant adaptation

carries / combines with oxygen haemoglobin present

more space for haemoglobin lack of nucleus

oxygen uptake / release biconcave shape / increased surface area

root hair cell

uptake of water / minerals increased surface area / cell extension

reject anchorage as a function

Alternative to Practical 1

- a (i) in order in the table
 - + 3.0 mm
 - + 1.5 mm
 - 1.0 mm - 3.0 mm
 - 4.0 mm
 - 5.5 mm
- (ii) points plotted accurately neat clear line passing through each point
- b (i) potato strips in sucrose solutions lost or decreased in length potato strips in water or dilute sucrose solutions increased in length point noted of no change in length
- (ii) <u>osmosis</u>

Extension 1

a any six of these points with a maximum of 3 for the diagram (third point)

suitable named plant cell function described diagram recognisable with main features drawn, at least 3 accurate labels cell wall cytoplasm / reference to lack of cytoplasm (sap) vacuole nucleus chloroplast (or other named feature appropriate to named cell)

b nine points from the following **provided** cell is named

red blood cell or corpuscle / erythrocyte reference to lack of nucleus description of shape provides large surface area (or alternative wording) reference to presence of haemoglobin carries / transports oxygen

phagocyte / granulocyte / monocyte / neutrophil has lobed nucleus can change shape / pass out of capillaries engulfs bacteria (or alternative wording) digests bacteria / foreign material (or alternative wording)

lymphocyte / B cells / T cells has large nucleus (or alternative wording) produces antibodies makes bacteria clump (or alternative wording) / ref. to long term immunity produces antitoxins neutralises toxins (or alternative wording)

а	any three of these biological / present in living organisms catalyst / speeds up reaction rate / lowers activation energy reference to protein nature reference to specificity
b	any three of these reference to optimum temperature / specified temperature eg 25 – 40°C reference to optimum pH (or specified pH for named enzyme) only work in liquid medium (or alternative wording) reference to lack of limiting factors for example concentration of substrate
c (i)	any three from amylase breaks down to starch reference to sugar / named sugar reject glucose / sucrose use, for example for energy / growth / respiration reference to sugar being soluble for transport
(ii)	any three of these protease / named protein enzyme, for example pepsin, trypsin breaks down / digests protein

(iii) any three of these

to amino acids / peptides reference to solubility

lipase breaks down / digests protein reference to fatty acids and glycerol reference to molecules small enough to pass through gut wall / into lymph or lacteal reference to site of action, for example small intestine / duodenum / ileum

Animal nutrition

CORE questions

Core 1

- (a) Much of the food we eat has to be digested.
 - (i) Explain why food needs to be digested.

[2]

(ii) Describe the part played by chewing in the process of digestion.

[2]

(b) (i) Describe how food is moved along the oesophagus by peristalsis.

[3]

(ii) Students sometimes wrongly suggest that food falls down into the stomach under the effect of gravity. Suggest **one** piece of evidence which would oppose this idea.

[1]

(c) Fig. 1 shows the human digestive system.

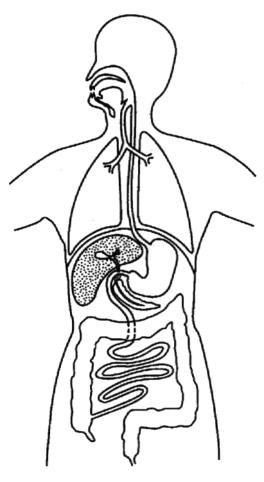

Fig. 1

(i) Using the appropriate letter, label on Fig 1 where each of the following is produced:

an amylase, (A);

hydrochloric acid, (B);

a lipase, (C);

a protease, (D).

[4]

(ii) State the nutrient on which protease enzymes act and name the products that are formed.

Nutrient[2]

[Total : 14]

Table 1 shows information about the composition of a fruit.

Table 1

nutritional component	amount in 100 g of fruit
energy	162 kJ
protein	0.6 g
sugars	8.7 g
fats	trace
fibre	1.6 g
minerals	trace
vitamins	trace

(a) (i) The average daily amount of protein needed by humans is 66 g.

How many kilograms of this fruit would a person need to eat if this was the only source of protein? Show your working.

		Answerkg [3]
	(ii)	List the four main chemical elements from which protein is made.
		1.
		2.
		3.
		4[2]
(b)	(i)	Describe how you could safely test this fruit to see if it contains reducing sugars.

[3]

(ii) State what you would observe if a reducing sugar is present.

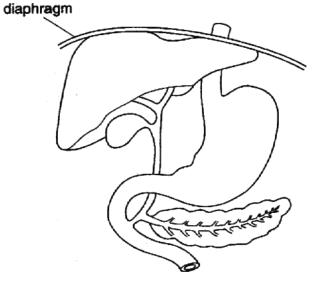

[1]

(c)	Fruit such as this is an important part of a healthy diet.		
	(i)	Suggest one reason for eating food rich in fibre.	
		[1]	
	(ii)	Name the vitamin which is associated with citrus fruits and green vegetables. State the function of this vitamin in the body.	
		Vitamin	
		Function	

[2]

[Total: 12]

Fig. 2 shows part of the alimentary canal.

- (a) On Fig. 2 label each of the following structures:
 - (i) stomach;
 - (ii) liver;
 - (iii) pancreas.

[3]

(b) Describe the parts played by the liver and the pancreas in the digestion of fats.

Liver

Pancreas

[4]

[Total:7]

ALTERNATIVE TO PRACTICAL questions

Alternative to Practical 1

(a) (i) Describe how you would carry out a test to show the presence of fat in a biscuit. What observation would indicate the presence of fat?

Test

Observation

[3]

(ii) Describe how you would use this test to compare the fat content of two different types of biscuit.

(b) Complete the equation below to summarise the process of fat digestion.

fat + water $\xrightarrow[(enzyme)]{}$ +

[Total: 8]

[3]

EXTENSION questions

Extension 1

Health workers in America were concerned about the diets of American people. In response a report was published called `Dietary Goals'.

Fig. 3 compares an average 1977 diet with the report's recommended dietary goals.

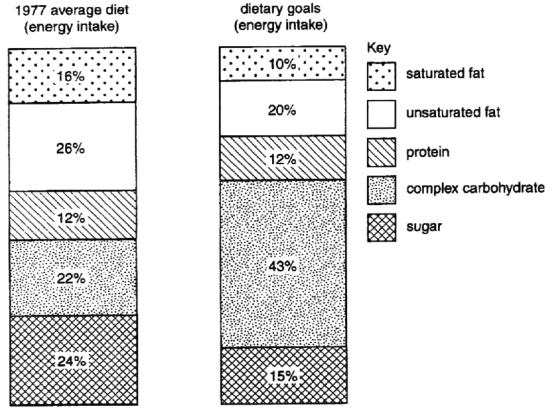

Fig. 3

(a) (i) What recommendations were made about changes to the fat content of the diet?

... [2]

(ii) Suggest why these changes were recommended.

[3]

18

(b)	Complex carbohydrates are long chain molecules.		
	Name	a long chain carbohydrate present in	
	(i)	plant tissue;	
	(ii)	animal tissue.	[2]
(c)	Sugge	st why a reduction in the sugar content of the diet was recommended.	
			[2]

It was also recommended that people should reduce their salt intake to about 3 g a day.

(d) Suggest why a high salt intake can be dangerous to health.

[1]

Babies need a carefully controlled diet to keep them healthy. Mothers are often advised to feed their babies with breast milk rather than with milk derived from cows (formula milk).

(e)	State milk.	State three advantages of feeding a baby with breast milk compared with formula milk.				
	1.					
	2.					
	3.	[3]				
		[Total: 13]				

		[8]
(i)	Explain how amino acids in the small intestine of a mammal are assimilate into muscle tissue.	ed [3]
(ii)	Outline the role of proteins in animals.	[4]
	protein (i)	into muscle tissue.

[Total: 15]

Animal nutrition – answers

Core 1

- a(i) to change food into simple / small / soluble form / molecules for absorption / diffusion(into intestine wall / villi) / carriage in blood
- (ii) any two of these make small enough to swallow increase surface area of particles mix with saliva / enzyme / amylase
- b(i) any three of these contraction of (circular) muscles behind food / bolus relaxation of muscles in front occurs rhythmically / in waves food forced forward / along tube
- (ii) any one of these can swallow standing on head / hanging upside down can swallow in space with no gravity some mammals (standing on four legs) have horizontal oesophagus some mammals can regurgitate food against gravity
- c(i) A label to salivary gland / mouth / pancreas
 - B label to stomach
 - C label to pancreas
 - D label to stomach / pancreas / small intestine
- (ii) protein / named protein amino acids / polypeptides / peptides

Core 2

- a(i) 66 / 0.6 = 110 110 x 100 g fruit = 11 (kg)
- (ii) carbon, hydrogen, oxygen, nitrogen
- b(i) add to Benedict's solution / Fehling's reagent heat use of water bath / goggles / any other relevant safety practice
- (ii) colour change to orange (accept yellow / brick red/ red-brown)
- c(i) any one of these aids peristalsis / movement of food along gut(or alternative wording) prevents constipation(or alternative wording) reduces fat absorption / risk of bowel cancer(or alternative wording)
- (ii) any one of these vitamin C maintains healthy skin wounds heal more rapidly prevents scurvy assists uptake of iron

- a labels correctly placed
- b any four of these
 - liver production of bile / bile salts

emulsifies fats / increases surface area (alternative wording) neutralises stomach acid / raises pH

pancreas

secretes lipase / enzyme digests / breaks down fats to fatty acids and glycerol

Alternative to Practical 1

a(i) emulsion test – add ethanol / alcohol pour into water

observation - cloudiness / white / milky / emulsion

- (ii) equal quantities of biscuit / same conditions one comparison described e.g. of cloudiness
- b lipase / esterase fatty acids and glycerol

Extension 1

 a(i) one mark for reduction / one mark for stating figures from reduce fat / saturated fat / unsaturated fat reduce fat content from 42% to 30% or by a quarter (or alternative wording) reduce saturated fat from 16% to 10 % or by a third or by 6%(or alternative wording) reduce unsaturated fat from 26% to 20% or by a fifth or by 6%(or alternative wording)

(ii) any one from reference to problems of obesity (resulting from too much fat in the diet) reference to presence of cholesterol in (some) <u>saturated</u> fats can cause atherosclerosis / atheroma / blockage of <u>arteries</u> reference to heart problems(or alternative wording) reference to arthritis problems

- b(i) starch / cellulose / hemicellulose / amylose / amylopectin / pectin / callose / insulin Reject glycogen glycogen / chitin Reject glucagon
- c(i) reference to dental decay(or alternative wording) reference to problems with obesity(or alternative wording) leading to heart disease / diabetes
- d reference to high blood pressure / greater risk of heart attack (or alternative wording)

any three of these breast milk contains antibodies or greater protection from infection breast milk contains foodstuffs in correct proportions (or alternative wording)

е

bottle milk may contain bacteria or cause intestine disease (accept breast milk is sterile) financial implications of bottle milk some babies are allergic to cow's milk reference to correct temperature of breast milk reference to convenience of breast milk or preparation involved with bottle milk no additives / preservatives in breast milk reference to bonding through breast feeding reference to triggering reduction in size of uterus

Extension 2

any eight of these
 reference to absorption of nitrogen-containing salts by roots (accept reference to ions)
 by diffusion / active transport
 reference to nitrogen-fixing bacteria in root nodules
 nitrogen salts transported in xylem
 reference to photosynthesis
 carbon dioxide is combined with / reacts with water
 using energy from (sun)light
 reference to chloroplasts / chlorophyll
 sugars produced
 nitrogen is combined with sugars to make amino acids / proteins

b(i) amino acids pass through ileum wall / epithelium or lining or wall of villus absorbed into <u>blood</u> (stream) transported to muscles in <u>plasma</u> amino acids synthesized into proteins (or alternative wording)

(ii) any four of these

reference to growth / repair / formation of new cells reference to hormones reference to enzymes constituent of cell membranes(or alternative wording) reference to haemoglobin reference to collagen reference to keratin reference to antibodies reference to fibrinogen / fibrin

Plant nutrition and transport

CORE questions

Core 1

(a) The chemical equation for photosynthesis shown below is incomplete.

6H ₂ O water	+	$\underbrace{\frac{energy}{plantpigment}}_{glucose} + \underbrace{\frac{C_6H_{12}O_6}{glucose}}_{flucose} + \frac{C$	
	(i)	Complete the equation in either symbols or words.	[2]
	(ii)	State the source of energy for this reaction.	
		[1]	
	(iii)	Name the plant pigment necessary for this reaction.	
		[1]	
	(iv)	Which mineral is needed by a plant to form this pigment?	
		[1]	
(b)	(i)	Name the tissue in which the sugar produced in photosynthesis is carried to other parts of the plant.	to
		[1]	
	(ii)	In many plants some of the sugar formed in photosynthesis is converted to starch for storage. Explain the advantage of storing starch rather than sugar	

(iii) Name the carbohydrate, formed from sugar produced in photosynthesis, which is used to build cell walls.

[1]

[Total : 9]

Fig. 1 shows changes in the rate of water loss from a plant during part of a day. It also shows changes in the temperature and light intensity over the same period.

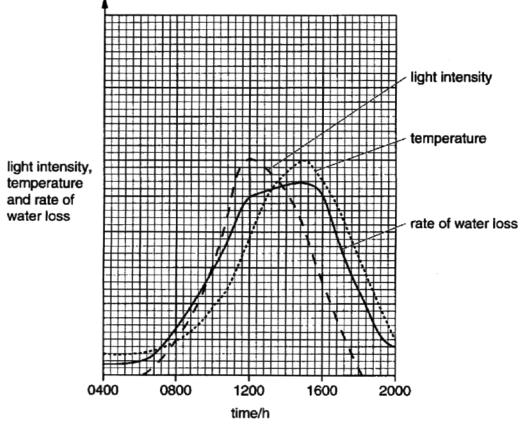

Fig. 1

(a) Explain why the rate of water loss rises steeply between 0700 and 1200 hours.

[3]

(b) Suggest which factor, light intensity or temperature, has the greater effect on the rate of water loss between 1200 and 1500 hours. Explain your answer.

Factor	
Explanation	
	[2]

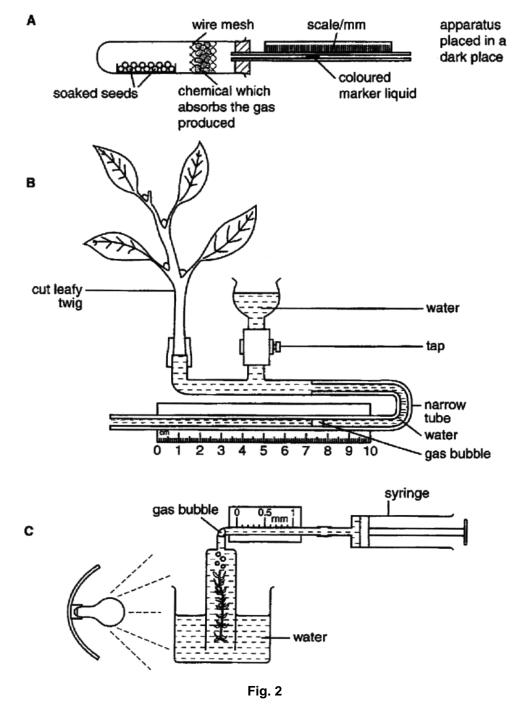

(c)	Predict and explain the likely effect on the rate of water loss if there had been heavy rainfall between 1100 and 1200 hours.
	Prediction
	Explanation
	[2]

[Total : 7]

ALTERNATIVE TO PRACTICAL questions

Alternative to Practical 1

Fig. 2 shows three sets of apparatus, **A**, **B** and **C**, used to measure different biological processes.

(a) Name the process that can be measured by each apparatus.

Α	
В	
С	 [3]

Alternative to Practical 1

(b) (i) Name the gas which is produced by the process measured using apparatus A.

[1]

(ii) Suggest **one** possible control for an experiment using apparatus **A**.

[1]

(c) When using apparatus **B**, it is possible to vary the external conditions. Suggest how changing **one named** external condition would affect the biological process measured by apparatus **B**.

[1]

(d) (i) Name the gas produced by the process measured using apparatus **C**.

[1]

(ii) How would you keep **one named** external factor constant when using apparatus **C**?

[1]

[Total : 8]

EXTENSION questions

Extension 1

Fig. 3 shows part of the lower surface of a typical dicotyledonous leaf.

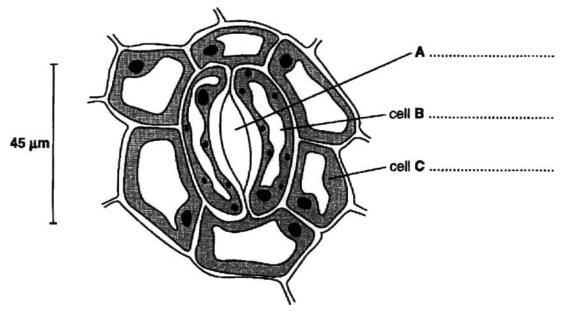

Fig. 3

(a) On Fig. 3, label part **A** and the cells **B** and **C**.

[3]

The surfaces of the leaves of two species of plant were studied and the number of stomata per unit area (stomatal frequency) was recorded.

Cobalt chloride paper changes colour in the presence of water.

Pieces of cobalt chloride paper were attached to the upper and lower surfaces of leaves on both plants. The plants were set up for one hour during the day. Any colour changes were recorded. The experiment was repeated for one hour at night. Table 1 shows the results.

	stomatal frequency		colour change to cobalt chloride paper]
plant			da	ay	nig	ght	Key
species	lower surface	upper surface	lower surface	upper surface	lower surface	upper surface	✓ colour change
Cassia fistula	0	18	x	1	x	x	X no
Bauhinia monandra	22	0	1	x	x	x	colour change

Table 1

(b) Describe the differences in stomatal distribution between the two species of plant.

.....[2]

(c) (i) Explain the colour changes to the cobalt chloride paper during the day.

[3]

(ii) Suggest why there was no colour change for either plant at night.

[1]

(d) Outline the mechanism by which water in the roots reaches the leaf.

 [3]
[0]

- (e) State and explain the effect of the following on transpiration rate:
 - (i) increasing humidity;

...... [2]

(ii) increasing temperature.

[Total : 16]

Fig. 4 shows an aphid feeding on a plant stem. Its mouthparts are hollow tubes which are pushed into the stem to remove sugar solution.

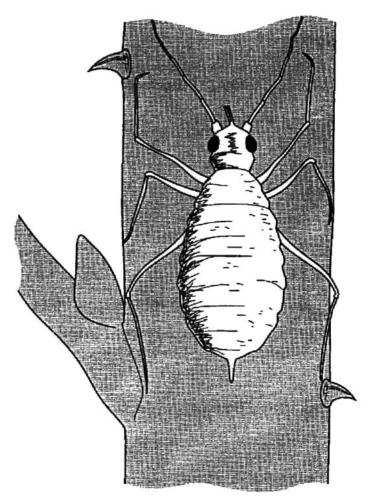

Fig. 4

(a)	Aphids are arthropods. State two features, visible in Fig. 4, which are common to all arthropods.
	1
	2[2]
(b)	In which tissue, and by what processes, does the sugar solution move through the plant?
	Tissue
	Processes
	[3]

Some of the sugar solution was collected from the plant stem. Plant cells were placed on a microscope slide and covered with this sugar solution.

(c) (i) Describe what changes would occur to each of the cell parts listed below, if the sugar solution was more concentrated than the sap in the cell vacuole.

Sap vacuole

Cytoplasm

Cell wall

[3]

(ii) Explain, in terms of water potential gradient, how these changes occur.

[3]

(d) Systemic pesticides can be used to kill pests such as aphids. Describe how the application of these pesticides to leaves kills aphids feeding on the stem.

.....[2]

[Total : 13]

A student carried out an experiment to investigate the growth of floating water plants taken from a pond. Equal masses of the plants were placed into three separate glass containers A, B and C, similar to the one shown in Fig. 5

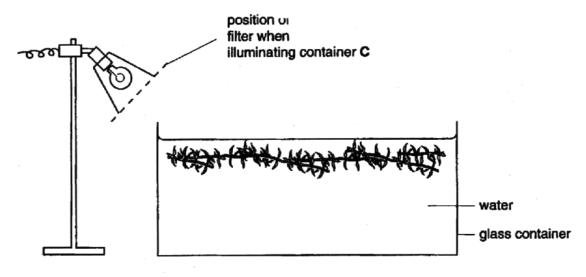

Fig. 5

Container **A** was lit by a 250 W bulb, **B** was lit by a 75 W bulb and **C** was lit by a 250 W bulb with a coloured filter in front of the lamp, as shown in Fig. 5

At weekly intervals, the plants were removed from each container in turn, gently dried, weighed and returned to the containers after their mass had been recorded. Fig. 6 shows the results plotted on a graph.

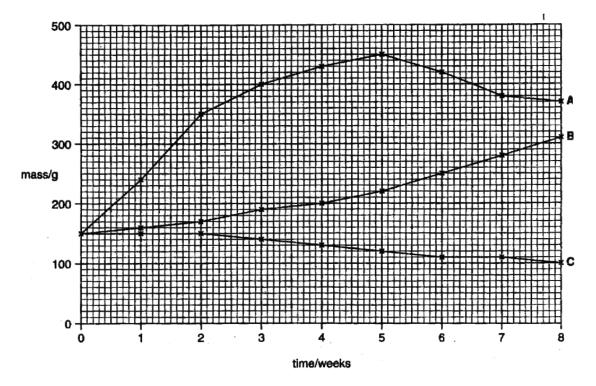

Fig. 6

(a)	With reference to Fig. 6 calculate the percentage increase in mass of the plants in container A during the first five weeks of the experiment. (Show your working.)
	% increase[2]
(b)	Suggest why the mass of plants in container ${\bf A}$ began to decrease after week 5, while the mass of plants in ${\bf B}$ continued to increase.
	Container A
	Container B
	[2]
(c)	During the eighth week, in which container would there be the least dissolved oxygen? Explain your answer.
Contair	ner
Explan	ation
	[2]

Plant nutrition and transport – answers

Core 1

а	any three of these light intensity increases the stomata open increase in temperature greater rate of evaporation / transpiration / diffusion		
b	factor-	temperature	
	explanation-	as light decreases the rate of loss continues to rise / temperature and water loss curves peak at the similar time	
С	prediction-	rate of water loss / transpiration falls / lower	
	explanation-	air saturated / humid (thus less evaporation)	

Core 2

a(i) 6CO₂ / carbon dioxide

6O₂ / oxygen

- (ii) sun / solar / sunlight
- (iii) chlorophyll
- (iv) magnesium / iron / nitrate / ammonium
- b(i) phloem
- (ii) starch is insoluble

has no osmotic effect / easier to retain in storage / prevent it being moved

(iii) cellulose

Alternative to Practical 1

- a A respiration / use of oxygen
 - B transpiration / uptake of water / water loss
 - C photosynthesis
- b(i) carbon dioxide / CO₂
- (ii) one from glass beads stones empty tube boiled, sterile, dry or dead seeds

c one from

moving air / wind / fan / dry air	speed up process
enclosed in a bag / increase humidity	slow process
cold air	slow process
hot air	speed up process
in darkness	slow process
in light / sunny	speed up process

- d(i) oxygen / O₂
- (ii) any one of these

light-intensity	fixed position of bulb / keep light on / same wattage /
temperature-	heat shield / in water bath / heat filter
carbon dioxide-	add hydrogen carbonate to water
biotic idea-	use same piece of waterweed

Extension 1

а	any two from presence of segmented body or abdomen presence of jointed limbs or appendages presence of head or eyes presence of exoskeleton	
b	<u>tissue</u> processes	phloem / sieve tubes reference to translocation reference to active transport or active uptake
c(i)	sap vacuole	gets smaller / shrinks / loses water / reference to increase in concentration
	<u>cytoplasm</u>	moves away from (cell) wall

- cell wall no longer curves outwards
- (ii) any three points water potential in vacuole / cell is higher than outside due to lower concentration of sugar molecules / higher concentration if water molecules in vacuole / cell so water moves out by osmosis through (cell) membrane
- d pesticides are absorbed into the leaf / plant / stem aphids feed on / suck / remove poisonous sap

Extension 2

- a A stoma / stomatal pore
 - B guard cell
 - C epidermal cell / epidermis
- b <u>upper surface</u>
 C. Fistula has 18 stomata while B. Monhandra has none
 <u>lower surface</u>
 C. Fistula has no stomata while B. Monhandra has 22

- c(i) three of these points water is only lost if stomata are present stomata open during the day so water (vapour) is lost reference to transpiration
- (ii) stomata are closed at night
- d any three of these points reference to xylem water enters xylem vessel through pots in walls reference to transpiration stream / pull reference to capillary action reference to root pressure
- e(i) rate will decrease reference to smaller gradient for diffusion
- (ii) rate will increase more energy for evaporation warm air can hold more water vapour than cold air

- a $\frac{300}{150} \times 100$ = 200%
- b <u>container A</u> depletion of salts / nutrients seeds released disease shortage of carbon dioxide reached end of life cycle <u>container B</u> photosynthesis growth nutrients not exhausted food stores sufficient carbon dioxide
 c container C
 - container C least or no photosynthesis occurring respiration exceeds photosynthesis death of plant so bacteria active, using up oxygen

Respiration and the human transport system

CORE questions

Core 1

Two characteristics of living organisms are nutrition and respiration.

List three other characteristics of living organisms.	
[3]	

(ii) Name the process by which green plants produce carbohydrates.

[1]

(b) Living organisms release gases into the atmosphere as a result of their various activities. Complete the table, using a tick (✓) or a cross (𝔅), to show which gases are released.

	carbon dioxide released into the atmosphere	oxygen released into the atmosphere
animals in bright light		
green plants in bright light		
animals in the dark		
green plants in the dark		

[4]

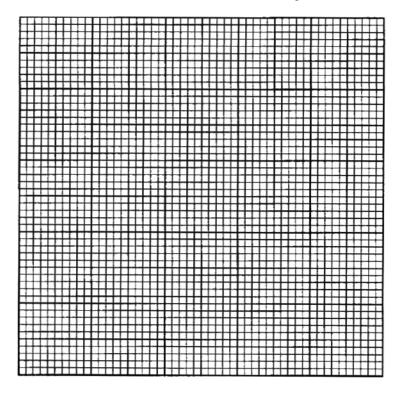

[Total : 8]

(a) Table 1 shows the frequency of human blood groups in a population.

Table 1

human blood group	% frequency in the population
A	46
В	9
AB	3
0	42

(i) Plot the data in the table as a bar chart on the grid below.

[3]

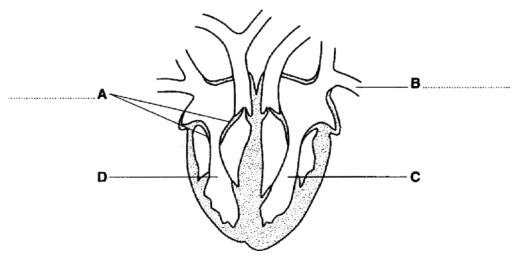

(ii) What type of variation is illustrated by these data? State a reason for your answer.

Type of variation
Reason

[2]

.

Fig. 1 shows a section through the heart.

- (a) On Fig. 1
 - (i) name the parts labelled **A** and **B**; [2]
 - (ii) shade the cavity of the ventricle which contains oxygenated blood; [1]
 - (iii) suggest why the wall around chamber **C** is much thicker than that around chamber **D**.

.....[2]

- (b) The coronary arteries supply blood to the heart muscle.
 - (i) Suggest **two** activities of humans which might cause a clot in a coronary artery.

1.	
2.	[2]
F . 1. 1	

(ii) Explain what might be the result of such a blockage.

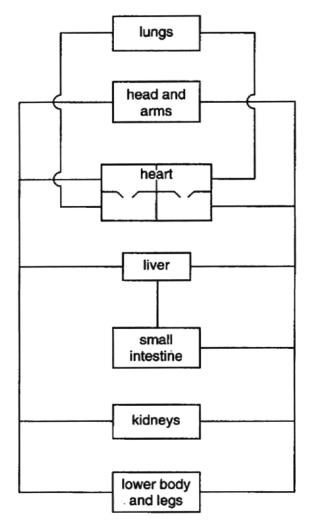

Fig. 2

On Fig. 2

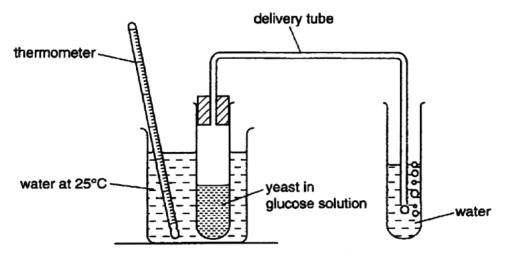

(i)	label where urea is formed;	[1]
(ii)	label where urea is excreted;	[1]
(iii)	show, using a series of arrows, the route taken by urea between these two organs.	[2]

[Total : 13]

ALTERNATIVE TO PRACTICAL questions

Alternative to Practical 1

Fig. 3 shows the apparatus that was used to investigate the activity of yeast in a glucose solution.

The number of bubbles released in one minute was counted. This was repeated another four times.

The temperature in the water bath was then raised to 35 °C and five more counts were made.

	number of bubbles re	eleased in one minute
	25 °C	35 °C
1	11	17
2	12	19
3	14	20
4	13	16
5	10	18
total		
mean (average)		

Table 2

(a)	(i)	Complete Table 3.1 to show the totals and mean numbers of bubbles released at each temperature.	[2]
	(ii)	Name the physiological process in yeast which is investigated in this experiment.	
		[1]	
	(iii)	State the effect of raising the temperature on the activity of yeast.	
		Explain your answer.	
		Effect	
		Explanation	
		[3]	
(b)	(i)	Name the gas present in the bubbles.	
	(ii)	Describe a test you could use to identify this gas.	
		[2]	
$\langle a \rangle$	Evala	Evelope why it is better to be use the experience for a few minutes of each temperature	

(c) Explain why it is better to leave the apparatus for a few minutes at each temperature before beginning to count the bubbles.

...... [2]

[Total : 10]

EXTENSION questions

Extension 1

- (a) Describe the functions of each of the following parts of the heart:
 - (i) right atrium;
 - (ii) right ventricle;
 - (iii) tricuspid valve.

[9]

(b) Outline the likely causes of a heart attack and suggest what preventive measures can be taken to maintain a healthy heart. [6]

[Total: 15]

Extension 2

An athlete takes part in a race.

- (a) Describe and explain what happens to her breathing rate as a result of the race. [5]
- (b) The level of adrenaline increases at the start of the race. Describe the effect of this increased level of adrenaline in the athlete's body. [4]
- (c) At the end of the race the athlete's body temperature has increased. Outline the body processes which cause her temperature to return to normal after the race. [6]

[Total: 15]

Respiration and the human transport system – answers

Core 1

- a(i) any three of these growth movement irritability / sensitivity excretion reproduction
- (ii) photosynthesis
- b

	carbon dioxide released into the atmosphere	oxygen released in to the atmosphere
animals in bright light	\checkmark	Х
green plants in bright light	Х	\checkmark
animals in the dark	\checkmark	Х
green plants in the dark	\checkmark	Х

Core 2

- a for three marks axes oriented correctly both axes labelled and with suitable scale on frequency axis all four columns correctly plotted
- b <u>type</u> discontinuous variation reason there are no intermediate values between the four groups / there are distinctly separate sets of values

Core 3

- a(i) A tricuspid / right atrio-ventricular / right cuspid valve
 - B pulmonary vein
- (ii) all of cavity of left ventricle shaded
- (iii) thicker wall can generate a greater pressurs / more powerful push / pump
- (iv) to pump / push / force blood further / all round the body / not just to the lungs
- b(i) any two of these smoking fat / cholesterol rich diet lack of exercise stress
- (i) restrict supply of oxygen / glucose / sugar to heart / ventricle muscle in area dies / heart ttack/ cannot respire
- c(i) label to liver
- (ii) label to kidney
- (iii) arrows from liver to heart and heart to kidneys arrows from heart to lungs and back to heart

Alternative to Practical 1

a(i)

	25 °C	35 °C
total	60	90
mean (average)	12	18

(ii) respiration / fermentation

(iii)	Effect	increase in number of bubbles released per min reference to a
		numerical increment

Explanation	reference to role of enzymes involved / kinetic energy / more
	molecular collisions of enzyme and substrate

- b(i) carbon dioxide
- (ii) limewater turns milky white
- c agitation of tubes equilibrium / temperature to be reached

Extension 1

a(i)	any three from these
	receives blood from vena cava
	reference to blood being deoxygenated
	acts as reservoir
	reference to thin muscle wall
	contracts / reference to atrial systole to move blood to right ventricle

(ii) any three of these receives blood from right atrium reference to thick / thicker muscle wall reference to builds up blood pressure contracts / reference to ventricular systole to move blood to lungs via pulmonary artery

(iii) any three of these reference to position

prevents backflow of blood / maintains blood flow in one direction reference to closing a ventricular systole / when pressure starts to build in right ventricle so blood can only leave via pulmonary artery

b any six of these

reference to high saturated or animal fat diet / reduce saturated or animal fat content of diet reference to too much cholesterol / reduce cholesterol content of diet fat / cholesterol builds up on coronary artery atherosclerosis / atheroma high salt diet / reduce salt content of diet stress / stress management high blood pressure smoking / stop smoking lack of exercise / take regular exercise obesity / take control of diet to reduce obesity

- a any five of these breathing rate increases to increase amount of oxygen / to replace used oxygen needed for aerobic respiration reference to muscles repaying oxygen debt remova of lacic acid reove / exhale morecarbon dioxide control of breathing rate by brain
- b any four of these increased heart rate / pulse rate to move blood faster so more oxygen / glucose goes to muscles non-essential processes slow down increased air flow into lungs / breathing rate so aerobic respiration increases stimulates conversion of glycogen to glucose increases mental awareness

c any six of these

increase in sweat production secreted from sweat glands onto skin sweat evaporated removing heat from skin surface / reference to cooling effect vasodilation arterioles more blood flows near skin blood carries heat so heat is lost from skin panting causes heat loss from lungs hairs lowered to allow more heat loss

Coordination, response and homeostasis

CORE questions

Core 1

(a) State the term which is used to describe the maintenance of a constant internal environment in the human body.

[1]

- (b) Describe how each of the following processes helps to maintain the temperature of the body:
 - (i) sweating;

.....[2]

(ii) vasodilation.

[3]

[Total : 6]

Fig. 1 shows the urinary system and its blood supply.

		x X X X X X X X X X X X X X X X X X X X	
		Fig. 1	
(a)	(i)	Identify the structures labelled X and Y on Fig. 1.	
		X	
		Υ	[2]
	(ii)	A function of the kidney is to remove urea from the blood. State one function of the kidney.	other
		[1]	
(b)		ver forms urea by breaking down excess amino acids. Name two other ances which are broken down by the liver.	
	1		
	2		[2]
(c)	The li	ver and kidneys are organs which help to maintain a constant internal onment.	
	Whick	n term describes this process?	
			[1]
			[Total:6]

- (a) A student reaching for a book on a bookshelf pricks his finger on the sharp point of a nail. He pulls his hand away very quickly.
 - (i) State the type of response which has occurred.

[1]

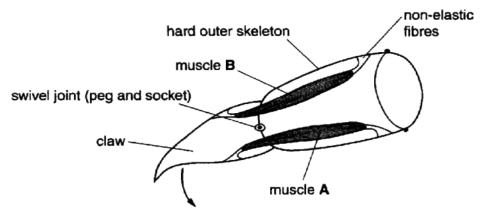

(ii) What is the effector in this response?

[1]

(iii) Name the type of nerve cell which links the central nervous system to the effector.

[1]

(b) Fig. 2 shows part of the leg of a crab.

(i) State what happens to muscles, **A** and **B**, in order for the claw to move in the direction of the arrow.

Muscle A[1]

(ii) Why do muscles in the leg occur in pairs?

[1]

(iii) Suggest why the fibres which join the muscle to the skeleton are non-elastic.

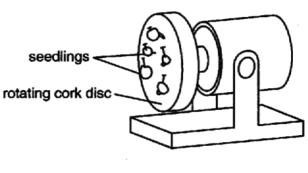

[1]

[Total : 6]]

ALTERNATIVE TO PRACTICAL questions

Alternative to practical 1

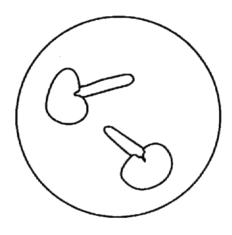

Fig. 3 shows a rotating clinostat with five seedlings attached.

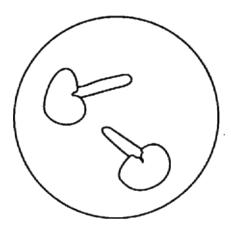

The cork disc is rotated slowly so that all sides of the seedlings are equally exposed to the stimulus of gravity.

(a) (i) On the diagram below, show the appearance of the seedlings after being attached to the rotating clinostat for two days. No labels are required.

[1]

(ii) On the diagram below, show the appearance of the seedlings after two days if the clinostat had **not** been rotating.

[2]

Alternative to practical 1

(iii) Explain the new appearance of the seedlings in (a) (ii) after two days.

(b) (i) What condition must be provided to ensure continued growth of the seedlings over the two day period?

[1]

(ii) How could this be achieved?

[1]

(c) Describe how you would ensure that **only** the response to gravity is being investigated.

[1]

[Total : 8]

(a)	(i)	Define the term reflex action.	[3]
	(ii)	Describe the pupil reflex and explain its advantages.	[5]
(b)	Disting	uish between rods and cones in terms of function and distribution.	[4]
(c)	Suggest how damage to three named parts of the eye could result in impaired vision or blindness. [3]		
		[Tota	l:15]
Extens	sion 2		
(a)	(i)	Define the term reflex action.	[3]
	(ii)	Describe the pupil reflex and explain its advantages.	[5]

(C)	Suggest how damage to three named parts of the eye could result in impaired vision or blindness. [3]		

[Total:15]

Coordination, response and homeostasis - answers

Core 1

- a homeostasis
- b(i) evaporation of sweat / water removes heat from the body / cools the body / reference to latent heat of vaporisation
- (ii) arterioles in skin relax increased blood flow through surface capillaries more heat loss from body by convection / radiation

Core 2

a(i) X - renal vein

Y – urethra

(ii) remove water / salts (from blood) or

osmoregulation or

control of water / salt content (of the blood)

b any two from these

alcohol drugs / named drug haemoglobin hormones / named hormone toxins

c homeostasis

Core 3

- a(i) reflex response / action / involuntary / automatic
- (ii) arm muscles / named arm muscle / muscle (unqualified)
- (iii) motor (neurone)
- b(i) A contracts B relaxes reject expands / stretches
- (ii) to pull leg / part of leg in opposite / different directions
- (iii) to pass / transmit all of muscle pull to skeleton / not to lose some pull in stretching the fibres

Alternative to Practical 1

- a(i) diagram shows all seedlings with longer straight roots
- (ii) diagram shows all seedlings with curved roots towards source of gravity correct extended growth region
- (iii) root tip / root / radicle responds towards gravity / grows downwards / shows geotropism
 reject points downwards / bends (or alternative wording)

correct reference to role of auxins

b(i) any one from water / moisture air / oxygen correct temperature / heat / warmth

reject carbon dioxide, light, minerals

(ii) must link to b(i)

<u>water / moisture</u> protective covering / glass / plastic box / keep seedlings moist / prevent seedlings drying out / adds water daily / supply water / soaked cotton wool

<u>warmth</u> heat from lamp / in temperature box / facing the sun / out of air conditioned area / warm room

air / oxygen ventilation / fan / breathing

c keep apparatus in the dark / uniform continuous light / red light / in light from all directions / keep moist to avoid hydrotropism

Extension 1

a(i) automatic response to a stimulus and one from reference to very fast reference to innate / not learned

 (ii) any six points from these light shines on (or alternative wording) retina electrical impulse generated (or alternative wording) passed to brain via motor neurones to iris circular muscles contract **reject** references to ciliary muscles to make pupils smaller protects rods and cones / retina from damage reflex is very fast / does not require thought / does not require decision

any four from cones detect colour reference to three types of cones / detect red, green, blue cones needed for fine detail rods cannot detect colour / only produce image in black and white rods distributed all over retina

b

cones concentrated in fovea / yellow spot cones only stimulated by bright light / rods sensitive to dim light

c any three from these

rods / cones / retina / damaged by bright light so not receptive lens cloudy or damaged so light cannot pass through cornea cloudy or damaged so light cannot pass through eyeball deformed / retina detached so cannot focus

optic nerve damaged so no impulses transmitted (or alternative wording)

Extension 2

a any four points from these

excretion

removal from the body of waste products of metabolism reference to substances which are poisonous / in excess / surplus to requirements

eqestion

removal of faeces from the body reference to via anus

b drawing marks

includes aorta, renal artery, kidney, ureter, bladder and urethra drawing clear and parts correctly labelled

explanation

reference to blood from aorta to renal artery blood enters kidney water filtered out reference to formation of urine urine passes down ureter reference to storage in bladder reference to sphincter muscle and role urine passes through urethra

c any four from

reference to deamination / breakdown of proteins or amino acids reference to formation of urea reference to breakdown of hormones / named hormones reference to breakdown of alcohol reference to breakdown of nicotine / other named drugs

Reproduction in plants

CORE questions

Core 1

A plant was allowed to disperse its seeds naturally. The seedlings were examined two weeks after they had started to grow. They were found to be of very different heights.

Suggest three environmental factors which could have affected the height of the (i) seedlings. 1. 2. 3.[3] (ii) The seedlings all developed from the seeds of a single plant. The plants which later developed from these seedlings showed a number of inherited differences. Suggest three possible reasons for these inherited differences. 1. 2. 3. [3]

[Total : 11]

Fig 1 shows a section through a bean flower.

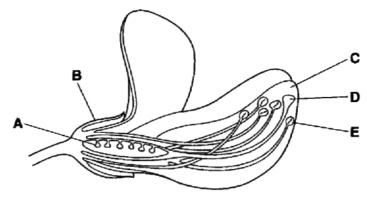

Fig.1

(a) Name the parts labelled **A** and **B**.

Α	
В	 [2]

(b) This flower is insect pollinated. Suggest how parts **C**, **D** and **E** help in pollination of this flower.

[3]

(c) After pollination the ovules develop into seeds. Describe the events which occur after pollination and which result in the formation of seeds.

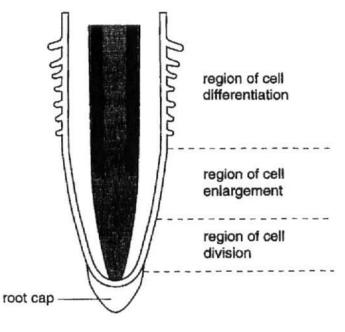

[4]

[Total : 9]

EXTENSION questions

Extension 1

Fig. 2 is a longitudinal section through a root tip showing the regions of growth and development.

(a) Distinguish between the terms growth and development.

[3]

(b) Outline what happens in the region of cell division.

[3]

The enlarging cells get bigger by absorbing water.

(c) (i) Name the process responsible for this absorption of water.

[1]

(ii) What condition must exist in a cell for water absorption to occur?

[1]

(iii) Which cell feature prevents the enlarging cells from bursting?

[1]

(iv) Suggest how the enlargement of these cells makes the root grow longer.

..... [2]

In the region of cell differentiation, a number of different tissues are formed.

(d) (i) Define the term *tissue*.

..... [2]

(ii) Table 1 contains some information about root tissues and their functions. Complete the table.

Table 1

name of tissue	function
xylem	
	transport of sugars
	absorption of water from the soil

[3]

[Total: 16]

(a)	Define the term <i>pollination</i> .	[2]
(b)	Describe the structure of a named insect-pollinated flower and state the its parts.	functions of [10]
(c)	Describe how cross-pollination leads to variation in a species.	[3]
		[Total:15]

(a)	Discuss, giving examples, how the use of modem technology has resulted in increased food production.	[9]
(b)	How is plant growth affected by a deficiency of magnesium ions?	[3]
(c)	How can minerals, trapped in the bodies of dead animals, become available for plause?	ant [3]

[Total:14]

62

Reproduction in plants – answers

Core 1

(i)

any three of these amount / brightness of sunlight / light water availability mineral supply rooting space other soil factors e.g. pH disease infections / damage by herbivores / animals affected by competitor species

(ii) any three of these

meiosis leading to variations in ovules / female gametes / nuclei meiosis leading to variation on pollen grains / male gametes / nuclei second / male parent may be different for different seeds / fertilisation of ovules from different pollen grains possibility of mutations / specific mutagen action correct reference to different genotypes of parents / heterozygous state for some genes

Core 2

- a A ovule / ovary B sepal / calyx
- b C (petals are) coloured / bright / shaped / produce nectar / have nectar guides to attract insects
 D (stigma / style) receives pollen from pollinator / insect
 E (anther / stamen) produces pollen / place pollen on insect
- c fusion of gametes / nuclei / fertilisation plus any three of these pollen tube grows / develops / forms through / down style / to ovary to micropyle / ovule / embryo sac male gamete passes through pollen tube / moves to female gamete/nucleus zygote develops into embryo reference to female gamete as egg cell, ovum

Extension 1

- a <u>growth</u> at least one from increase in size or number of cells or dry mass / getting larger irreversible / permanent due to cell division
 - <u>development</u> at least one from increase in complexity formation of different cells / tissues / organs / additions of new features
 - three references from mitosis chromosomes division of nucleus formation of new cells / daughter cells

b

- c(i) osmosis / diffusion
- (ii) higher concentration of solutes than outside the cell / lower water potential in cell
- (iii) cell wall
- (iv) two points from

 cell swells up / becomes turgid / gets longer / elongates
 press against each other
 results in increase in overall length of root / whole root gets longer
 downward growth as a result of upper part of root being anchored
 cells elongate vertically
- d(i) group of cells of the same type carrying out the same function
- (ii) <u>name of tissue</u> (xylem) <u>function</u> transport of water or minerals / support phloem / sieve tubes root hair (cells) (absorption of water from soil)

- a transfer of pollen from anther / stamen to stigma
- b ten marks from the following

named insect-pollinated flower sepals, description of position or shape or appearance reference to protection of flower while in bud petals, description of position or shape or appearance attracting insects / acting as landing stage / guides present to direct insects to nectar stamen = anther + filament anther, description of position or shape or appearance
pollen filament, description of position or shape or appearance supports anther carpel = stigma + style + ovary stigma, description of position or shape or appearance receives pollen style, description of position or shape or appearance supports stigma for pollination / acts as a pathway for pollen tube ovary, descriptions of position or shape or appearance contains ovules / reference to site of fertilisation / becomes the fruit nectary position / reference to scent produces nectar flower stem supports flower for greater visibility to insects receptacle acts as base for other flower parts ovule and position forms seeds

c reference to mixing of genetic material can result in different genotypes so phenotypes / offspring appearance can be different

а	any nine from these
a	any nine from these chemical or artificial fertilisers provide more of named mineral or element results in greater crop yield (linked to above) pesticides / fungicides reduces crop damage by insects or fungi / farm animal infestation herbicides reduce competition between crop and weeds for named requirements (e.g. light / minerals / water) reference to use of machinery larger areas of land to be cultivated / saves time reference to artificial selection of crop types results in greater yield / ability to grow crops on harsh climates reference to genetic engineering / cloning one example of use reference to use of bacteria to make yoghurt reference to use of single cell protein to make meat substitutes reference to controlled conditions in greenhouse reference to improved weather forecasting and application use of satellites to observe crop disease / need for fertiliser use of computerisation and application reference to intensive animal farming / fish farming use of animal food concentrates / balanced feeding use of ruit production reference to intensive animal farming / fish farming reference to intensive animal for animal rearing / plant growing or fruit production
	reference to biological control of pests
b	any three of these needed for production of chlorophyll needed to trap sunlight

- needed for production of chlorophyll needed to trap sunlight reference to photosynthesis no sugars produced so protein synthesis not possible reference to chlorosis / yellowing of leaves / pale leaves
- c reference to decomposition / rotting by fungi / bacteria / saprophytes / named decomposers releases minerals into the soil

Human reproduction

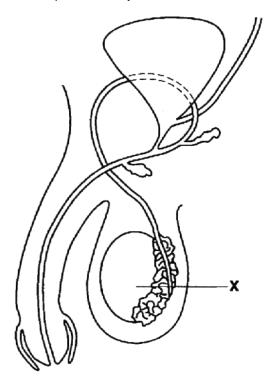

CORE questions

Core 1

(a) State what is meant by the term *sexual reproduction*.

[3]

(b) Fig. 1 shows the mate reproductive system.

(i) Name the part labelled **X** and state **two** of its functions.

Name Function 1

Function 2

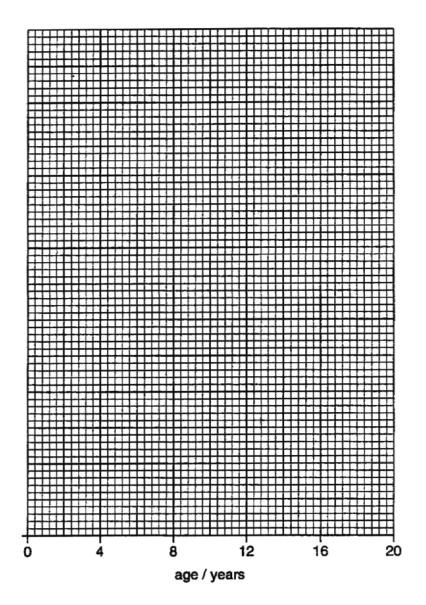

[3]

(ii) Birth control can be brought about by surgery. Mark clearly on Fig. 1 where such an operation would be carried out in a male. [1]

(c)	The male sex hormone causes a number of changes in the body during puberty. State two of these changes other than changes to the reproductive system.
	1
	2
	[2]
	[Total : 9]

Table 1 shows the average masses of girls and boys from birth to 20 years of age.

			Iai	DIE 1	
		g	irls		boys
age/years mass/kg			mass/kg	age/years	mass/kg
0 3				0	4
	1		9	1	10
4 16 4 16					16
8 25 8 28				28	
12			40	12	38
	16		53	16	59
	20		56	20	65
(a)	(i) (ii)	Using	oth sets of data as sepa your graph, state at whi e same. [2]	_	
	(iii)	State birth. 1.	two factors, apart from i	ts sex, which could affe	ect the mass of a baby a
		2.			[2]
(b)	(i)	What	evidence in the graph sh [1]	nows that girls undergo	puberty before boys?
	(ii)	Name female	the hormone responsib es.	le for the changes whic	h occur at puberty in
			[1]		
	(iii)	State	two changes which occu	ur at puberty in females	5.
		1.			
		2.			
					[Total: 13

EXTENSION questions

Extension 1

Pregnant women at high risk of having a baby with Down's syndrome are often offered an amniocentesis. This technique is shown in Fig. 2

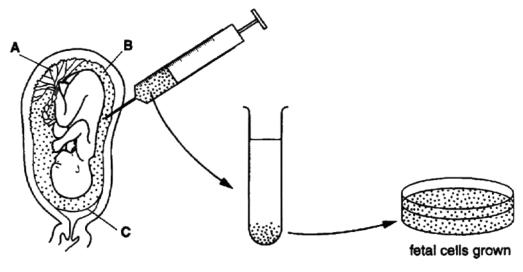

Fig. 2

(a) Complete the table by identifying the parts labelled **A**, **B** and **C** and stating a function of each one.

part	name	function
Α		
В		
С		

[6]

The technique involves taking a sample of **B** from within the uterus. Fetal cells in the sample are then grown and analysed.

(b) (i) Suggest how the cells would be different from normal cells if the fetus has Down's syndrome.

.... [1]

(ii) What is the cause of this difference?

[1]

(c) Suggest how the sex of the fetus could be identified by observation of fetal cells.

[3]

During pregnancy women may also be monitored in other ways, including urine sampling.

(d) Suggest why the urine of pregnant women is analysed.

...... [2]

[Total: 13]

(a)	Describe the movement of named materials from the mother to the fetus.		
(b)	Describe the signs, symptoms and effects of the disease syphilis.		
(c)	Explain		
	(i)	how HIV is transmitted, and	
	(ii)	how its spread can be prevented.	[7]
(d)	Explain why the methods for treating syphilis cannot be used for the treatment of AIDS.		[2]

а	increase in numbers / producing new individuals
	requiring the fusion / joining
	of gametes / sperm and ovum / two special cells / genetic material / DNA
	form two individuals

b(i) X – testis production of sperm / gametes production of testosterone / male hormone

Human reproduction – answers

- (ii) mark / cut shown clearly on sperm duct, not at the junction with the urethra
- c any two from deepening of voice / breaking of voice development of facial hair development of pubic / axillary hair widening of shoulder girdle enlargement of limb muscles

Core 2

- a(i) five marks awarded as follows vertical axis labelled logical scale points plotted accurately points joined lines identified
- (ii) 10 / 11 years 14 / 15 years
- (iii) any two from mother's diet genetic factors disease if mother smokes / passive smoking if it is a single / multiple birth / premature birth
- b(i) increase in mass in teenage years begins earlier / girls at 12 are heavier then boys
- (ii) oestrogen
- (iii) any two of these onset of menstrual cycle / periods start / ovulation starts widening of hips development of breasts / mammary glands axillary hair / pubic hair redistribution of fat layer under skin

Extension 1

а	A = placenta	reference to transfer / exchange of materials, mother to foetus /
		V.V.
	B = amniotic fluid	cushions foetus from physical damage / absorbs excretory materials from foetus / supports foetus

C = amnion / amniotic sac / amniotic membrane contains amniotic fluid / secretes amniotic fluid

- b(i) reference to presence of 47 chromosomes / extra chromosome
- (ii) reference to mutation reference to unequal chromosome division reference to extra number 21 chromosome
- c reference to use of microscope / analyse or observe chromosomes presence of xx chromosomes = girl / female presence of xy chromosomes = boy / male
- d EITHER reference to testing for presence of glucose to test for diabetes

OR

а

reference to testing for protein reference to possible consequences of protein loss reference to testing for diseases reference to testing for drugs reference to checking hormone levels

Extension 2

any six of these points reference to placenta allows maternal blood to come close to that of foetus allows diffusion of materials reference to foetal capillaries reference to transfer of oxygen from maternal red blood cells / haemoglobin

- reference to transfer of glucose / amino acid / other named nutrient reference to transfer of antibodies reference to plasma, linked to above
 - pass from placenta to foetus via umbilical cord / vein

b any six of the following

chancre / hard lump / painless sore / blister on part of body which contacted partner reference to rash / sore throat reference to raised temperature reference to headache reference to ulceration / sores on other parts of body reference to discharge any tertiary symptom or effect: hair loss / teeth / nose / skeleton / skin / brain / nervous system / liver / blood vessels / paralysis / blindness / infertility / insanity / aneurism / death / damage to foetus reference to 3 stage disease / stages named

c(i) any four of these

transmitted in named body fluid e.g. blood, semen passed during unprotected sex reference to use of shared needles / razors / unsterilised needles reference to blood transfusions with unscreened blood / organ transplants reference to transmission from mother to foetus (ii) any three of these

reference to education about AIDS / HIV use of condom during sexual intercourse / reference to safe sex use of sterile needles / do not share needles / avoid contact with contaminated blood avoid casual sex

d any two from

syphilis is caused by a bacterium HIV is a virus, not AIDS antibiotics are not effective against viruses

Inheritance and evolution

CORE questions

Core 1

Hair colour in mice is controlled by a gene with two alleles. A homozygous black-haired mouse was bred with a homozygous brown-haired mouse. All the offspring were black-haired.

(a)	(i)	Explain what is meant by the terms homozygous and recessive.	
-----	-----	--	--

Homozygous

Recessive

..... [2]

(ii) Which is the dominant hair colour in mice?

[1]

- (b) One of the heterozygous black-haired offspring was bred with a homozygous brownhaired mouse.
 - (i) Using the symbols **B** and **b** to represent the two alleles, draw a genetic diagram to show the outcome of this cross. [4]

(ii) State the ratio of the phenotypes of the offspring.

[1]

[Total : 8]

Fig. 1 shows, in outline, the stages of the division of a cell.

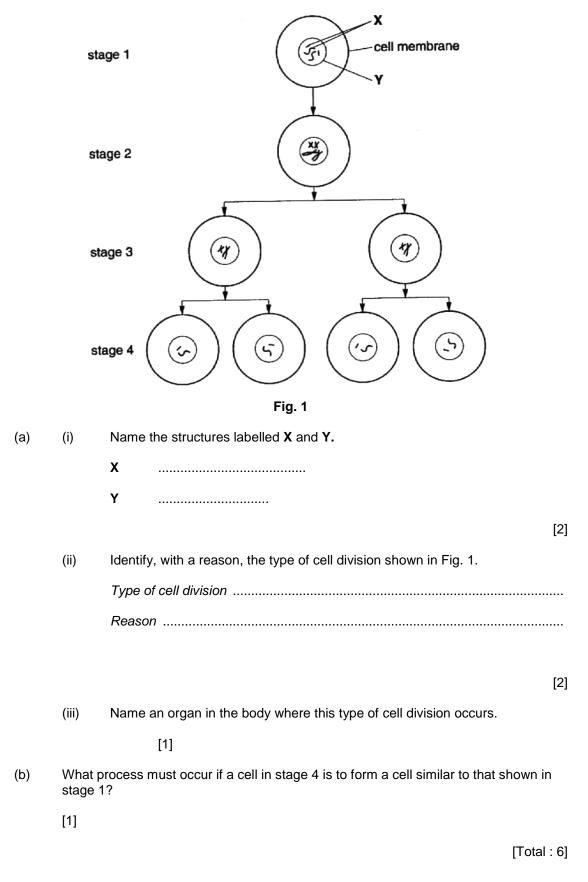

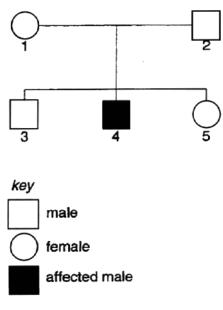

Fig. 2 shows the inheritance of a condition in humans known as phenylketonuria (PKU).

This condition affects the liver, causing it to produce toxins which can affect the mental health of the sufferer.

(a) State, with an explanation, whether the allele for PKU is dominant or recessive.

[3]

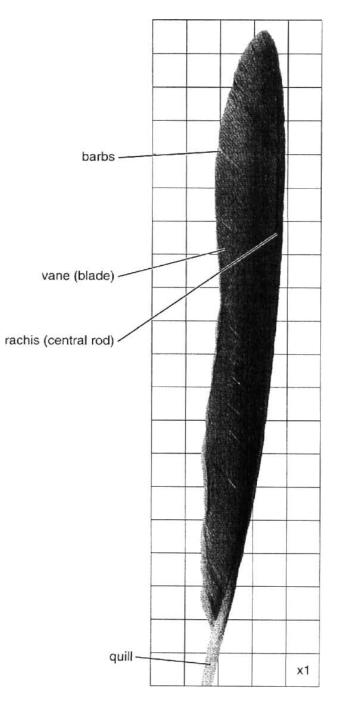

(b)	(i)	Using the symbols H for the dominant allele and h for the recessive allele, state the genotypes of individuals 1 and 4.
		Individual 1
		Individual 4[2]
	(ii)	What are the two possible genotypes of individual 3?
		[1]

[Total : 6]

ALTERNATIVE TO PRACTICAL questions

Alternative to Practical 1

Fig. 3 is a photograph of a flight feather of a bird.

(a) Determine the surface area of the feather, excluding the quill.

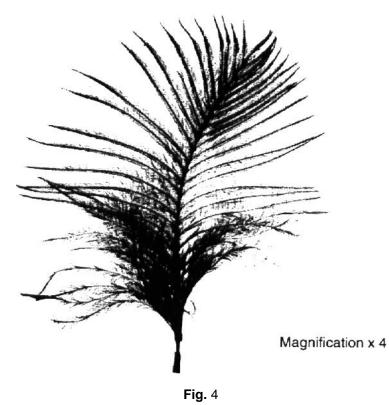

Show your working.

Surface area of feathercm²

[3]

Alternative to Practical 1

Fig. 4 is a photograph of a down feather. These feathers form a dense layer close to the skin surface of a bird.

(b) Complete Table 1 to show **three visible** differences between the flight feather in Fig. 3 and the down feather in Fig. 4.

Table	1
-------	---

	flight feather	down feather
1		
2		
3		

Alternative to Practical 1

(c) (i) Suggest how the down feathers may be important especially to young birds in cold climates.

(ii) Using a beaker of hot water to represent a young bird, describe an experiment you could carry out to support your suggestion in (c) (i).

[3]

[Total : 11]

EXTENSION questions

Extension 1

Cystic fibrosis is an inherited disorder in humans in which an important protein is not produced. This protein is responsible for preventing the accumulation of thick and sticky mucus in the breathing tubes. The allele which causes cystic fibrosis is recessive to the normal allele (F).

(a)	State the genotype of	

- (i) a carrier of cystic fibrosis;[1]
- (ii) a sufferer of cystic fibrosis[1]
- (b) Draw a genetic diagram to show if it is possible for a man with a dominant pair of alleles and a woman who is a carrier to produce a baby with cystic fibrosis. Identify the phenotypes of the children.

...... [2]

[Total : 8]

[4]

⁽c) Suggest how the build up of sticky mucus would affect a sufferer of cystic fibrosis.

Extension 2

Some people suffer from sickle cell anaemia. They have abnormal red blood cells.

(a) (i) Describe the shape of a **normal** red blood cell.

[1]

(ii) State how the appearance of an abnormal red blood cell from a sufferer of sickle cell anaemia differs from a normal red blood cell.

[1]

(iii) What is the effect of sickle cell haemoglobin on the function of the red blood cell?

[1]

The allele for normal haemoglobin is represented by the symbol H^A. The allele for sickle cell haemoglobin is represented by the symbol H^S. The alleles are codominant.

- (b) State the genotypes for
 - (i) a person with normal haemoglobin;

[1]

(ii) a heterozygous person;

[1]

(iii) a person with sickle cell anaemia.

[1]

- (c) Which of the genotypes stated in (b) is likely to result in
 - (i) the greatest protection from malaria?

[1]

(ii) the greatest risk of an early death in a malaria-free country?

[1]

A man with sickle cell anaemia married a woman heterozygous for sickle cell.

(d) Using a genetic diagram, predict the possible percentage of their children that would suffer from sickle cell anaemia.

Percentage[5]

[Total : 13]

Extension 2

A man with sickle cell anaemia married a woman heterozygous for sickle cell.

(d) Using a genetic diagram, predict the possible percentage of their children that would suffer from sickle cell anaemia.

Percentage[5]

[Total : 13]

Inheritance and evolution – answers

Core 1

a(i) homozygous – both alleles present are the same / individual received the same allele from both parents / gametes

recessive – an allele which is only exhibited when present in the homozygous state / when the dominant allele is not present / masked by dominant allele, <u>not</u> gene

- (ii) black
- b(i) up to 4 points are scored for the following use of capital B for dominant (black) allele / lower case b for recessive allele correct genotypes for both parents (Bb, bb) gametes correctly displayed (B, b and b, b or b) correct genotypes of offspring (Bb, bb) correct phenotypes identified (for all offspring)
- (ii) correct ratio predicted (1:1 or 1 in 2 or 50%, 50%)

Core 2

- a(i) X chromosomes Y – nucleus / nuclear membrane
- (ii) meiosis four nuclei are produced / number of chromosomes / genetic material is halved / new nuclei haploid
- (iii) ovary / testis / gonad
- b fertilisation / fusion of sperm and ovum / gametes / formation of zygote

Core 3

a recessive

4 has inherited PKU from parents (or alternative wording) as it is not apparent in 1 or 2 / neither parent shows it / if dominant a parent would show it / have PKU

- b(i) 1 Hh 4 – hh
- (ii) HH and Hh

Alternative to Practical 1

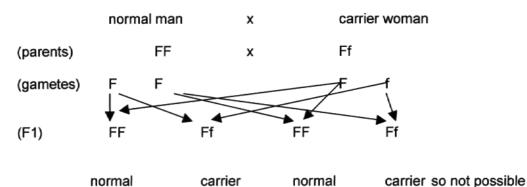

- a working includes squares to be marked on the feather breakdown of rows into sub-totals / tally grids total to be in the range 25 – 30 cm²
- b three visible differences to include references to shape, area, appearance of barb or blade, appearance of rachis (central rod), size or shape of quill
- c(i) insulation / traps air / keeps it warm / stops heat escaping / traps heat maintains body temperature / homiothermy / warm blooded reference to young birds do not fly or less

active so generate less heat / large surface area to volume ratio / no regulation of body temperature / not able to keep temperature the same

 (ii) any three of these within the context of a fair test uses several feathers or any insulation to wrap around a body / glassware use of thermometer to follow cooling recorded at intervals comparison of apparatus with and without any covering or with flight feathers

Extension 1

- a(i) Ff
- (ii) ff
- b

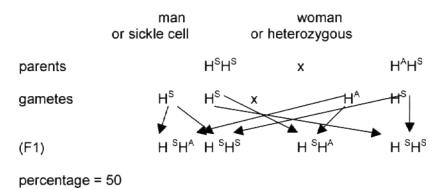

c any two of these

reference to trachea /bronchi / bronchioles / alveoli blocked or congested makes gaseous exchange more difficult reference to lack of energy / respiration impaired reference to being more susceptible to infections reference to digestion affected

Extension 2

- a(i) biconcave disc
- (ii) reference to sickle / crescent shaped
- (iii) able to carry / absorb less oxygen
- b(i) H^AH^A
- (ii) H^AH^S
- (iii) H^SH^S
- c(i) H^SH^S
- (ii) H^sH^s

d

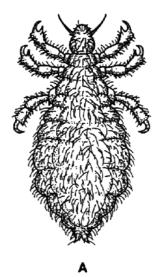

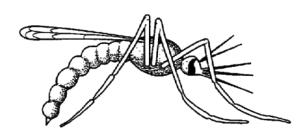

Organisms and environment

CORE questions

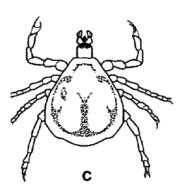

Core 1

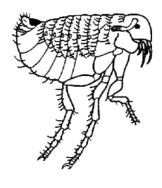

Fig. 1 shows five arthropods, each of which could carry disease organisms.

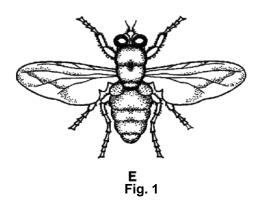

в

D

Use the key to identify each of the animals. Complete Table 1 to show your identifications.

KEY

1	Wings present Wings absent	Go to 2 Go to 3
2	Wings longer than the abdomen Wings shorter than the abdomen	Musca . Anopheles
3	Has three pairs of legs	Go to 4 Drnithodorus
4	All pairs of legs of similar length One pair of legs shorter than the other two pairs

Fig. 2 shows single leaves from each of six different trees.

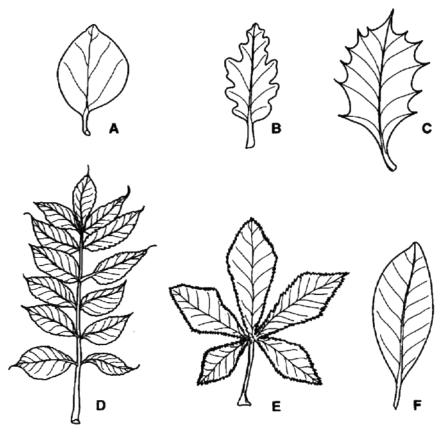

Fig. 2

Use the key below to identify from which tree each leaf comes. Write the name of each tree in the correct box of Table **2**. As you work through the key, tick the boxes in Table **2** to show how you identified each leaf. Leaf A has been identified for you as an example.

Key

			Name of tree
1	(a)	Leaf with a smooth outline	2
	(b)	Leaf with a jagged outline	3
2	(a)	Leaf about the same length as width	Cydonia
	(b)	Leaf about twice as long as it is wide	Magnolia
3	(a)	Leaf divided into more than two distinct parts	4
	(b)	Leaf not divided into more than two distinct parts	5
4	(a)	Leaf divided into five parts	Aesculus
	(b)	Leaf divided into ten or more parts	Fraxinus
5	(a)	Leaf with pointed spines along its edge	llex
	(b)	Leaf with rounded lobes along its edge	Quercus

Fig. 3 shows a nitrogen cycle for open grassland.

(a)

(i)

[1]

(ii) Name an example of a nitrogen compound which is excreted by mammals.

Name one nitrogen compound found in plants.

[1]

	(iii)	Process ${\bf X}$ can only occur in certain plants. Which group of organisms carry out this process and where in a plant are they found?
		Organism
		Where found[2]
(b)		assland is ploughed up and turned into farmland. Crops of maize are grown on after year.
	(i)	Predict and explain the effect of this change on the nitrogen cycle and on the crop yield.
		Effect on the nitrogen cycle
		Effect on crop yield
		[4]
	(ii)	Suggest one way in which the farmer could prevent the effect on crop yield.

[1]

(ii) any four from

ARACHNIDS have 4 pairs of legs / 8 legs have no antennae have simple eyes have chelicerae / poison fangs have a cephalothorax have thin / no carapace breathe with gill / lung books

(iii) any four from

MONOCOTS have one cotyledon / food store / seed leaves

have strap-shaped leaves flower parts are grouped into threes

have fibrous roots

have stomata evenly distributed on both leaf surfaces

have vascular bundles scattered

VIRUSES have a protein coat have RNA or DNA are smaller have no slime capsule have no membrane have no cytoplasm can only reproduce inside living cells only show reproduction no flagellum

CRUSTACEA

have 5 pairs of legs / 10 legs or more have antennae / have two pairs have compound eyes have no chelicerae / poison fangs poorly defined cephalothorax have thick carapace have gills

DICOTS have two cotyledons / food stores / seed leaves

have broader leaves flower parts are grouped in 4's / 5's / larger numbers

have tap roots

have stomata unevenly distributed on leaf surfaces

vascular bundles arranged in ring

b three of the following points

named example using genus and species reference to two names for the organism reference to genus and species reference to use in classification

Extension 2

- a(i) plants
- (ii) any two from reference to method of nutrition or no chlorophyll no cellulose cell walls or reference to chitin present hyphae present or reference to mycelium
- b(i) 56.3×100 64.4 = 87.4%
- (ii) Possible features

wings / impermeable cuticle or exoskeleton / antennae / 3 pairs of legs / compound eyes / small size / large numbers formed through reproduction

Possible explanations linked to named features

Wings: reference to flying, to find food, to escape from predators, to find a mate

Cuticle: to reduce water loss, to survive in hot or dry places, muscle attachment, protection from predators, protection of internal organs

Antennae: to sense food, early warning of predators, to sense a mate

Small size: easy to hide from predators, only small amounts of food or water needed to survive

Large numbers: some will survive to breed, reference to variation

Spiracles: for ventilation, control of ventilation

Reproduce in large numbers: so some will survive, increases chances of variation to cope with environmental change

- c(i) Presence of feathers/beak
- (ii) refernce to scales/eyes/tail/mouth/anus

$$d(I) \qquad \frac{1700000}{100} \times 14.3 \\ = 243100$$

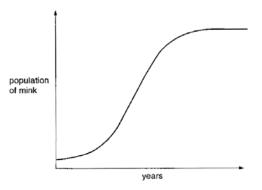

Human influences on the environment

CORE questions

Core 1

In the summer of 1998 about 2000 mink were released from captivity into one area of forest in southern Britain. Mink are aggressive carnivorous mammals.

The graph shows how the population of mink might change over a few years if there were no human interference.

(a) State three factors which would cause the mink population to become constant.

	1
	2
	3
	[3]
(b)	It might be expected that a graph for human world population would show a similar pattern. However, it is now thought that the human population will continue to grow steadily. Suggest three reasons why this might happen.

	3
	[3]
	[Total : 6]

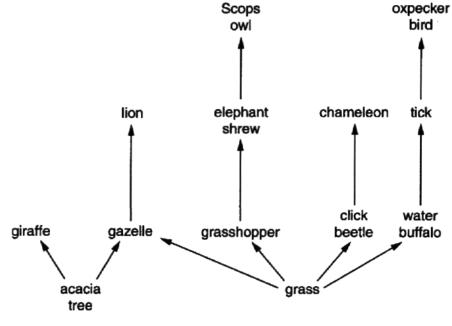

Fig. 1 shows a food web which includes some organisms in the African grasslands.

(a) (i) In the space below draw a food chain consisting of **four** organisms. The organisms must be part of the food web.

[2]

(ii) Using examples from the food web, explain the difference between producers and consumers.

[4]

(b) When weather conditions are favourable the grasshopper population can suddenly increase enormously.

Predict and explain the effect this might have on the

(i) Scops owl population;

(ii) water buffalo population;

.....[2]

(iii) giraffe population.

[3]

[Total : 13]

Sheep were first taken to the island of Tasmania in 1814. Fig. **2** shows changes in the size of the sheep population in Tasmania between 1818 and 1930.

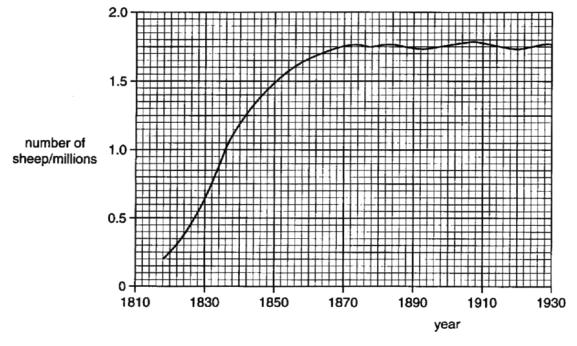

Fig. 2

(a) State the size of the sheep population in 1842.

[1]

(b) (i) Suggest biological reasons for the steep rise in the number of sheep between 1830 and 1840.

.....[2]

(ii) Suggest biological reasons for the shape of the curve between 1870 and 1890.

...... [2]

[Total : 5]

ALTERNATIVE TO PRACTICAL questions

Alternative to Practical 1

Samples of animals living on the surface of logs in a woodland were collected.

The animals found on the top and sides were brushed carefully into a tray.

The animals found on the underside of the logs were brushed carefully into a second tray.

The animals were identified, sorted into groups and counted. This information was recorded in Table 2 1

Table 1

animal group	fooding optogony	number of animals		
animal group	feeding category	top and sides of log	underside of log	
snails	herbivores	4	3	
mites	herbivores	12	9	
larvae of flies	herbivores	1	8	
centipedes	carnivores	0	5	
spiders	carnivores	2	7	
beetles	carnivores	2	4	
woodlice	detritivores*	2	10	
millipedes	detritivores*	1	4	

* Detritivores are animals that eat dead matter such as fallen leaves.

(a) (i) Complete Table 2 to show the numbers of animals in each feeding category expressed as a percentage of the total number of animals found on the underside of the logs.

Table 2

feeding category	number of animals found on the underside of the logs	percentage %
Herbivores	20	
Carnivores	16	
Detritivores	14	
Total	50	100

Alternative to Practical 1

(ii) Using Fig. **3**, construct a pie chart to show the proportion of herbivores, carnivores and detritivores collected from the underside of the logs.

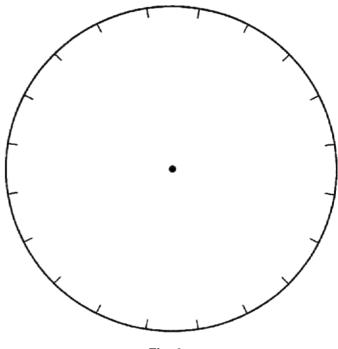

Fig. 3

(b)	Suggest two reasons why most animals were found on the underside of the logs.				
	1				
	2				
	[2]				

(c) Describe an investigation you could carry out to compare the number of animals living amongst fallen leaves in two different woodland habitats.

[Total : 10]

EXTENSION questions

Extension 1

South Uist is a small island which provides one of the few remaining summer habitats for a bird called the Corncrake (*Crex crex*). It lives in hay fields where it feeds on insects, worms and seeds. South Uist provides a good habitat because there are plenty of hay fields where the Corncrake can nest and there are few predators.

However, a small mammal called the Hedgehog (*Erinaceus europaeus*) was released onto the island. The Hedgehog also has few natural predators and will feed on the eggs of Corncrakes, as well as on insects and worms. The number of Hedgehogs on South Uist has risen rapidly to 10 000 while Corncrakes are becoming endangered as their numbers worldwide are falling.

(a)	(i)	State two features which birds and mammals have in common.	
		1	
		2	
	(ii)	State two features which distinguish birds from mammals.	
		1	
		2	
			[4]
(b)		est why isolated islands such as South Uist are more easily colonised by bird nammals.	S
	[1]		
(c)	State f	three reasons why South Uist provides a good habitat for Corncrakes.	
	1		
	2		
	3		. [3]
(d)	Explai	n why Corncrakes are becoming endangered by Hedgehogs.	
			. [2]

Extension 1

(e) Draw a food web to show the feeding relationships described in the passage. Assume that insects and worms feed on leaves.

[4]

(f)	Suggest two ways by which the extinction of the Corncrake may be prevented.				
	1				
	2				
	[2]				
	[Total : 16				

(a)	Describe and explain the possible effects of allowing untreated sewage to enter a small lake.	[5]
(b)	Outline a treatment of sewage which would produce re-usable water.	[6]
(c)	Describe how a plant living in a dry habitat is adapted to conserve water.	[4]

Human influences on the environment – answers

Core 1

а	any three of these predators of the mink competition with other predators for the same food prey limited by availability of prey's food disease / parasites
b	any three of these humans have no natural predators food supplies may be moved from areas of excess to areas of shortage medical advances in disease prevention medical advances in curing / treating patients humans modify habitats for themselves

limited use of family planning programmes

Core 2

a(i) grass or plant grasshopper water elephant shrew tick Scops owl / grass or plant bird buffalo oxpecker

linked by arrows pointing towards the consumers

(ii) named producer example

makes its own food / glucose / gains energy by photosynthesis

named consumer example

gains energy / takes in / eats ready-made food / other organisms

b(i) Scops owl population would rise – plague of grasshoppers would increase elephant shrew population / food if Scops owl will increase

water buffalo population would fall – more grass eaten by grasshoppers / less food available for water buffalo

(ii) grasshoppers eat more grass so less food for gazelles

either gazelles eat more acacia so less food for giraffes and population falls

or gazelle population falls and eats less acacia so more food for giraffes so population rises

Core 3

- a 1.25 million
- b(i) any two from these most of offspring surviving little / no competition for / plenty of food / space few / no natural parasites / predators / diseases no limiting factors
- (ii) any two of these

births equal deaths some factor / food supply limiting / competition for food / space / because of overcrowding introduction of / increase in parasites / disease / predators / competitor species / deliberate husbandry

Alternative to Practical 1

- a(i) in order in the table
 - 40 32 28
- the pie chart should show correct proportions for the segments correct order of segments (largest starting at 12 position and going clockwise in decreasing size)
- b wet / damp darkness (or alternative wording)
- c to include four of these points hand search and / or Tullgren funnel sample standard area same time of year identify animals and trophic levels repetition of samples

Extension 1

- a(i) any two from four limbs body covering (or alternative wording) backbone warm blooded lungs
- (ii) any two from, provided feature linked to correct group birds have feathers / animals have fur birds lay eggs / mammals produce live young mammals suckle young birds have a beak birds have scales on legs
- b birds can fly over water or it is difficult for mammals to swim long distances
- c few predators present hay fields present for nesting hay fields provide a food source (or alternative wording)
- d any two of these hedgehogs eat corncrake eggs hedgehogs eat the same food / reference to insects or worms corncrakes nest on the ground

hedgehog corncrake (eggs) insects worms seeds leaves

any two of these

remove / exterminate hedgehogs from the island create corncrake sanctuaries (which are hedgehog-fre) introduce corncrakes to other islands reference to captive breeding programme

Extension 2

а any five of the following points reference to the presence of nitrates / phosphates effect of above i.e. plants grow faster reference to light blocked out for deeper plants plants die (linked of the above points) dead plants provide food for bacteria numbers of bacteria increase animals in water die due to lack of oxygen bacteria respire (aerobically), using up oxygen reference to eutrophication reference to possible presence of disease- causing organisms b any six of the following points sewage screened (or alternative wording) to remove large objects

settling tanks allow grit to settle out sludge allowed to settle out reference to anaerobic conditions killing aerobic pathogens, linked to above remaining liquid sprayed onto stones or clinker reference to presence of protoctists / bacteria microorganisms feed on sewage harmful substances removed, linked to above reference to aerobic stage killing many anaerobic bacteria reference to clear water effluent produced (or alternative wording) reference to chlorination

- any four of these С
 - thick cuticle reduced number of stomata stomata only open at night rolled leaves hairs on leaves leaves reduced to spines deep or long roots fleshy stem
